Transplant roots to permanent bed which has been dressed liberally with stable manure or peat moss and a good fertilizer. Make the rows 4 to 6 feet apart. A bed 15 by 20 feet requires 100 roots. ITALIAN BROCCOLI

This vegetable aristocrat is rapidly attaining unusual popularity. The rapid-growing, tall-branching plant forms, within 90 days, a central head of bluish green flower-buds resembling a loose head of cauliflower. After the head is cut the plant produces many side-shoots, each one bearing a small head over an inch in diameter. These shoots, when about 6 inches long, are cut and marketed 2 and 3 to the bunch. It is cooked and served like cauliflower.

Culture. Very easy to grow. Culture same as for cabbage. It requires a definitely cool season for its proper growth. One ounce will produce 1,500 plants; 4 to 6 ounces, an acre.

597 Waltham 29. Fine for market and freezing. Produces dark green center heads with fine buds and strong side sprouts. Plants are short and sturdy. Pkt. 15c; 1/2 oz. 30c; oz. 50c; 1/4 lb. \$1.50; lb. \$4.50; 5 lbs. \$21.25. Not prepaid: 10 lbs. \$40.00.

72 DeCicco. An extremely early strain ready for market 10 days ahead of Green Sprouting. Produces fine large compact heads and a high percentage of side shoots. Pkt. 15c; oz. 45c; 1/4 lb. \$1.40; lb. \$4.00; 5 lbs. \$18.75. Not prepaid: 10 lbs. \$35.00.

Contender

Stringless Black Valentine Beans

How to Grow Beans: Plantings commence in the Lower South during January, February and March. Sow 1½ to 2 inches deep, 3 to 4 inches apart, in rows 2½ to 3½ feet apart. Cultivate often until plants blossom. Deep cultivation when in bloom will cause many flowers to fall, and cultivating when plants are wet with dew may cause rust and spread anthracnose if it is present. Frequent picking insures a prolonged bearing season. Two pounds will sow 100 feet of row; 60 pounds (bushel), an acre.

Cauliflower

DANISH GROWN SEED

Culture. Requires rich soil and abundant moisture. The only significant difference in the culture of Cauliflower and that of cabbage is that with Cauliflower the heads must be protected from sunlight in order to insure the much desired white curd. This is most readily accomplished by gathering the leaves together loosely, as soon as the heads begin to form, and tying them at the top. One ounce will produce 2000 strong plants; 1/2 pound sufficient for an acre.

The large heads are snow-white, solid, finely grained and deep. It heads so evenly that the entire crop may be harvested within a short time after it begins to mature. Pkt. 25c; 1/4 oz. 65c; 1/2 oz. \$1.10; oz. \$1.90; 1/4 lb. \$5.25; lb. \$17.50.

Pkt. 30c; 1/4 oz. 80c; 1/2 oz. \$1.45; oz. \$2.60; 1/4 lb. \$8.25; lb. \$29.50.

Crisp Delicious LETTUCE

With the discovery of its valuable health-giving vitamins, Lettuce has become a year-round table necessity. It is so easily grown that no garden need be without a generous supply.

Culture. Lettuce requires a rich soil, plenty of moisture, and a quick, steady growth from the time seeds are planted, until the heads are ready for use. The most common causes of failure to get Lettuce to head properly are too late planting and not giving the plants sufficient room for developing. Lettuce seed is difficult to germinate in hot weather. We suggest the seed be first soaked in ice-water for an hour, then wrapped in dampened paper or cheese-cloth and placed in the refrigerator for 10 to 12 hours prior to planting. Spread seed out on dry paper in shade and dry slightly. Immediately broadcast on good moist seed-bed, or sow 8 to 10 inches apart in rows 15 to 18 inches apart, covering with less than $\frac{1}{2}$ inch of fine soil. One ounce will sow 150 feet of row; 2 to 3 pounds an acre.

315 Great Lakes. 82 days. 1944 All-America Bronze Medal Winner. This outstanding Lettuce of Iceberg type has proven itself remarkably adapted for the South. Heads have a very large frame, with a solid, compact base, are round in shape, medium green in color and crisp and tender. The plants are vigorous, producing heads of giant size. Pkt. 15c; oz. 35c; $\frac{1}{4}$ lb. \$1.65; lb. \$5.00; 5 lbs. \$22.75. Not prepaid: 10 lbs. \$43.50.

FLORIDA ICEBERG

320 80 days. A new strain of Iceberg developed largely for the South and more especially Florida.

Enjoy "Vine Ripened" Cantaloupes

Culture: Prefer rich, sandy soil and plenty of sunshine. When the ground has become thoroughly warm, spade in well-rotted manure about $\frac{1}{2}$ foot deep, at the rate of a shovelful for each hill. Drop 8 to 10 seeds in slightly raised hills 4 to 6 feet apart each way, covering with $\frac{1}{2}$ to 1 inch of fine soil. When plants have produced their rough leaves, thin to the 3 or 4 strongest in each hill. Practice frequent shallow cultivation until vines cover ground.

Commercial growers start the seed in hotbeds, in paper pots, or dirt-bands and later transplant to the field. Earlier planting can be accomplished by use of Hotkaps (see page 25). For fungus diseases in general, spray frequently with Fermate (see Insecticide page No. 58). One ounce will sow 50 hills; 2 to 3 pounds an acre.

113 IMPROVED PERFECTO

95 days. This variety has achieved great popularity. The flesh is thick, of a fine custard-like texture, and the triangular seed-cavity is the smallest found in melons of this type. Just about perfection for a true Cantaloupe. Watermelon, Florida Giant

HOW TO GROW 'EM

Rich sandy loam soils are considered best for Watermelons but good crops are grown on any well-drained, fertile soil. Adding well-rotted manure to soil gives the plants a good start and to commercial growers we recommend an application of 600 to 800 pounds of commercial fertilizer (analyzing about 4 per cent ammonia, 12 per cent phosphoric acid, and 4 per cent potash) to the acre. Space hills at least 10 feet apart. This method will give about 360 hills to the acre. When the soil has become warm, drop 6 to 8 seeds in each hill and cover about 1 inch. Later thin to 2 to 3 of the largest plants. One ounce will plant 25 hills; $\frac{1}{2}$ to 2 pounds per acre.

Recommended for early market and home gardens. Pkt. 15c; $\frac{1}{2}$ oz. 55c; oz. 95c; $\frac{1}{4}$ lb. \$2.75; lb. \$9.00; 5 lbs. \$42.50.

No garden should be without its quota of Tomatoes. They require little care and yield heavily in a small space. No vegetable can be put to more uses, cooked or in salads, than Tomatoes. They are rich in vitamins, and valuable as an appetizing dish in many ways.

Maturity dates given are from the setting of plants to marketable fruits.

Culture. For early fruit, sow thinly in a hotbed or indoors in shallow boxes. Harden plants by exposing to the air occasionally. In about 6 weeks the plants will be ready to set out, provided danger of frost is over. The rows should be 4 to 5 feet apart and the plants about 3 feet apart in the row, or 2 feet in row if staked. Cultivate as long as the vines will permit. Tomatoes are much improved in appearance and quality when trained to stakes. The usual method is to set one strong plant to a 5- or 6-foot stake, tying the plant up and pruning it quite freely as the vine advances in growth. One ounce will produce 1500 plants; 4 to 6 ounces will furnish sufficient plants for an acre.

It does splendidly sown with Lespedeza, Dallis Grass, Black Medic and White Clover. Carpet Grass can be grown wherever the temperature does not fall below 10 degrees. It is a drought-resistant grass and furnishes fine grazing during long dry spells. Sow at the rate of 10 to 15 lbs. per acre for pasture and 25 to 30 lbs. for lawns, public parks, and golf courses. Lb. 95c; 5 lbs. \$3.55. Not prepaid: 10 lbs. \$4.90; 100 lbs. \$45.00.

Sow 10 to 15 pounds to the acre for pastures; 5 lbs. to 1,000 square feet for lawns. Germinates in 20 to 30 days with proper soil moisture. Lb. 70c; 5 lbs. \$2.70. Hulled BERMUDA Grass

826 Reuter offers his Extra Fancy Bermuda Grass with the hull removed, a process which gives much quicker germination. Under favorable moisture and soil conditions, Reuter's Hulled Bermuda Grass will germinate in 7 to 10 days, whereas unhulled seed requires 20 to 30 days. In fact, it germinates almost as quickly as Rye Grass. It is the same grade as our famous Fancy Bermuda offered above with the almost watertight hulls removed, previously believed impossible. Furthermore, it is more economical, because only about half the quantity is necessary to sow a 100 square feet of lawn. It is revolutionizing Bermuda lawn planting with its quick, positive results.

Seed should be sown from March until November in the lower South and from May until September in the upper South. Plant 2 lbs. to each 1,000 (50x20) square feet of lawn, fairway, athletic or aviation field. Use 10 pounds per acre for pasture. Plant when ground is warm because Bermuda will not germinate in cold soil. Be sure to specify HULLED SEED when ordering, otherwise the unhulled seed will be shipped.

Prices: Lb. 90c; 5 lbs. \$3.45. Not prepaid: 10 lbs. \$4.40; 100 lbs. \$40.00.

NK 37 Bermudagrass

849 NK 37 Bermudagrass (Hulled) is a giant variety that not only grows firm seed, but gives higher yields as well. Similar in appearance to the popular Coastal Bermudagrass having the same erect giant growth and vigorous spreading habits but with one major difference: NK 37 can be planted from seed. NK 37 grows tall enough to be cut for hay with four or five cuttings a year as average. Tests indicate that it tolerates frost, remains green later than common Bermuda and makes more spring and fall growth. Lb. \$2.20; 5 lbs. \$9.50. Not prepaid: 10 lbs. \$16.50; 100 lbs. \$160.00.

Common RYE Grass

840 An annual, tall, broad, flat-leaved deep green grass very valuable for winter lawns and pastures. Produces within 3 weeks, or less, a beautiful green winter lawn. It is one of the most important and valuable winter pasture grasses for the entire South. Grows from 2 to 3 feet high. Withstands severe winters perfectly. On mellow soils no preparation is needed—simply sow seed and lightly cover. Requires 10 pounds per 1,000 square feet for lawns; 25 to 30 pounds per acre when used alone for pasture. Spring sowings are conducted during January and February. Reuter offers seed of the highest quality. 5 lbs. \$1.70. Not prepaid: 10 lbs. \$1.70; 100 lbs. \$13.75.

St. Augustine Grass

Perennial grass for shady lawns in the lower South. It is a deep green, broad-bladed grass, creeping by means of surface runners. Seed is not available, but lawns are established by rooted runners, laid down in parallel trenches about 8 to 10 inches apart. A bushel will plant 200 square feet. Write for free leaflet. Not prepaid: Bus. \$2.25; 10 bus. \$20.00. Available April to October.

Zoysia Japonica Grass

828 This lawn grass will thrive well both in the full sun and in dense shade. Because it grows only 3 to 4 inches tall, it requires little mowing. The new strain we are offering grows as rapidly as St. Augustine Grass in warm weather, is immune to chinch bugs and has a tendency to crowd out crab grass. Formerly this grass could not be planted from seed, for seed production was exceedingly difficult; however, much experimentation and laboratory work has now made this excellent lawn grass available to you in its easiest planting form—seed. Full directions for planting with each purchase. Lb. \$3.00; 5 lbs. \$14.00. Not prepaid: 10 lbs. \$25.50; 100 lbs. \$225.00.

PENSACOLA BAHIA ★ SUDAN GRASSES

843 This grass for grazing is as good as any of the improved grasses if grazed while young or kept heavily grazed. It stands more cold weather and more dry weather than any of the other Summer grasses. Hot weather, cold weather, dry weather, rich land, eroded land, clay or sand—Pensacola Bahia will thrive and grow. Relatively unknown 5 years ago, it is fast becoming one of the South's leading grasses. Pensacola Bahia is a narrow leaf Bahia Grass (*paspalum notatum*) that has a heavy, deep, fibrous root system. It has been grown successfully in combination with Clover, Lespedeza and Fescue Grass. Plant at the rate of 10 to 20 lbs. per acre. Lb. 80c; 5 lbs. \$3.15. Not prepaid: 10 lbs. \$3.90; 100 lbs. \$36.00.

KENTUCKY 31 FESCUE

823 Certified Kentucky 31 is a perennial bunch grass. The bunches increase in size and eventually make a close tight sod. It is best suited for use as permanent pasture grass since it prevents erosion, and holds up livestock in wet weather, and produces large amounts of succulent pasture the year around. It will grow almost anywhere but the better the soil the better the grass. It is particularly suited to wet ground and will survive water standing on it for weeks at a time. It also grows well on high ground and stands drought well. Plant 10 to 20 pounds to the acre depending on whether a dense sod is desired or not. Lb. 65c; 5 lbs. \$2.35. Not prepaid: 10 lbs. \$2.75; 100 lbs. \$24.50.

823-A Uncertified (98/90) Lb. 60c; 5 lbs. \$2.15. Not prepaid: 10 lbs. \$2.45; 100 lbs. \$21.50.

PANIC GRASS

845 Giant Blue Panicum is a marvel among pasture grasses. It is a deep-rooted perennial bunch grass that forms good sized, tough crowns by means of thick, short, bulbous rhizomes. The plants may reach a height of six feet under the best of growing conditions. The bottom half of the stem has large nodes and body internodes. Branching from the lower nodes is common if the main stem is cut off. The panicles are terminal on the stems and branches. It doesn't make much growth for the first several months during which time it is building a root system. After it gets the roots well established it grows amazingly fast and is resistant to drought. It prefers heavy loam soils of high fertility and needs irrigation if annual rainfall is under 25 inches.

Panicum is a sweet grass used for hay and pasture. It is rich in protein and food value and yields per acre more than double that of Alfalfa. Seed should be planted in moist soil and covered lightly using only one pound per acre. Lb. \$1.15; 5 lbs. \$4.60. Not prepaid: 10 lbs. \$7.00; 100 lbs. \$65.00.

JOHNSON GRASS

827 Recognized as one of our most valuable hay and forage plants, although considered a pest in many parts of the South. No other grass makes such enormous yields of hay—3 to 4 cuttings a season—and the hay compares favorably with timothy and alfalfa. It should be cut or mowed just when the seed-heads begin to form. There is always a great demand for Johnson Grass hay, as it is relished by all stock, especially horses. In places where it can be controlled, there is no other perennial grass that makes as good yields of hay. Resists drought remarkably well. Sow 40 pounds to the acre from early spring until early fall to give you a permanent summer pasture and a hay-crop forever. Mixtures of Johnson Grass and other crops, such as oats and cowpeas, also make a good quality of hay. Lb. 60c; 5 lbs. \$2.10. Not prepaid: 10 lbs. \$2.40; 100 lbs. \$21.00.

TEOSINTE

913 A giant forage plant. The yield is truly enormous and 50 tons of green forage per acre is not unusual. Grows 8 to 12 ft. high, sending up from 20 to 50 stalks from a single root. If harvested when 4 to 5 ft. high, 2 or 3 cuttings may be obtained in a single season. Plant during April and May in drills 3½ to 4 feet apart; 2 to 3 pounds plants an acre. Crop doubtful—write for prices.

BENE

914 One of the finest crops for poultry feed and highly recommended for planting to attract quail and partridges. It's a hardy, tall, annual herb growing 4 to 7 ft. high, producing flowers followed by seed pods which scatter oily seeds in great profusion. Frequently planted to bait dove fields. Plant in rows out in the woods and also in cotton and cornfields at the last cultivation at the rate of 5 lbs. per acre. We offer the tall growing variety. Lb. 75c; 2 lbs. \$1.25; 5 lbs. \$2.85. Not prepaid: 10 lbs. \$3.70; 100 lbs. \$34.00.

SWEET SUDAN

824 Sweet, juicy and more palatable to livestock than the Common Sudan, and even after the crop reaches maturity the stalks and stems are relished by cattle. Sweet Sudan has more and broader leaves, heavier and taller stalks and stools much heavier than the Common variety. It is later in maturity than the Common Sudan, thereby producing more vegetative growth and remaining green and growing longer than the Common. More grazing can, therefore, be expected. When planted side-by-side with Common Sudan, the cattle kept the Sweet Sudan grazed to the ground, while the Common Sudan was grazed down to the height of one foot. It's resistant to leaf-disease. Lb. 50c; 2 lbs. 90c; 5 lbs. \$1.75. Not prepaid: 10 lbs. \$1.40; 100 lbs. \$11.00.

DALLIS GRASS

834 (*Paspalum Dilatatum*.) One of the most valuable permanent pasture grasses in the South. Comes nearer growing year-round than any other grass. Makes its fastest growth on moist bottomland, but gives satisfactory results on dry hill lands, and will even grow in burnt-over timber land. It stops washes and gullies. Withstands continued drought well. We know of no better grass to withstand flood conditions. Light freezes do not injure this grass.

Dallis Grass grows well with Lespedeza, also White Dutch, Alsike, Hop, Black Medic and Persian Clover. The spring planting commences in January. Broadcast 10 to 15 lbs. per acre if sown alone.

834 Imported Seed. Lb. \$1.35; 5 lbs. \$5.65. Not prepaid: 10 lbs. \$9.00; 100 lbs. \$85.00.

RED TOP Grass

833 Stands wet weather and overflowing comparatively well. Will hold well during the summer if cut often. Sow in the spring until April at the rate of 5 pounds per 1,000 square feet for lawns and 10 to 15 pounds per acre for pasture. Cover seed lightly. Lb. 95c; 5 lbs. \$3.75. Not prepaid: 10 lbs. \$5.20; 100 lbs. \$48.00.

BUFFEL GRASS

846 The perennial bunch grass that rejuvenates wornout fields, checks erosion and provides excellent quick-growing hay and grazing. As green forage or as hay its protein content is very high. Grows well on sandy or heavy soil and stands severe drought.

Plant in the Spring at the rate of one to two pounds of seed to the acre in rows 36 inches wide. Use a firm bed and seed not over ¼ inch deep. Lb. \$3.10; 5 lbs. \$12.25. Not prepaid: 10 lbs. \$22.50.

Kentucky Blue Grass

836 Excellent lawn grass; ideal for golf fairways and putting-greens; the sweetest and best pasture grass. Plants slightly creeping with deep green narrow leaf blades. It is only adapted to parts of the upper South and Northward. 5 pounds will sow 1,000 square feet for lawns; 40 pounds per acre for pasture. Plant in the fall and early spring. Lb. 95c; 5 lbs. \$3.75. Not prepaid: 10 lbs. \$5.20; 100 lbs. \$48.00.

★ STARDEL COTTON SEED

A Recent Introduction
by Louisiana State University

STARDEL Registered Cotton Seed

922 Without a doubt this new variety represents one of the greatest advances for this important cash crop in many years. Southern Cotton farmers may now have a new weapon to compete with nylon and other synthetic fibers.

It is a high yielding variety that carries greater fiber strength. Stardel averages $1 \frac{1}{16}$ inches in staple length, has a fiber of average fineness, and has given excellent performance in milling tests.

Stardel's production characteristics also are attractive—medium early in maturity and outyielding the leading varieties grown in Louisiana in tests throughout the state the past three years.

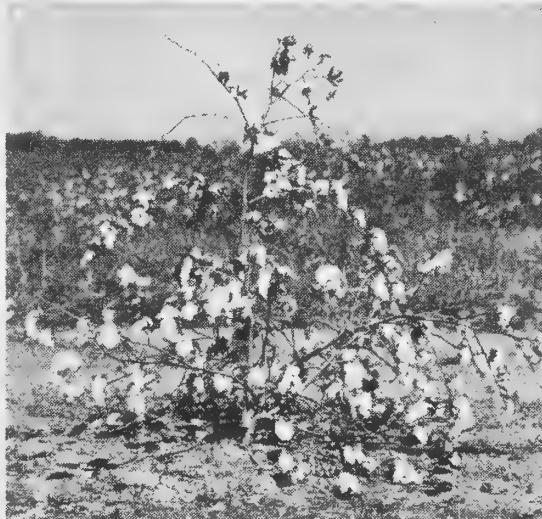

The picking qualities are good, as it opens well, is fluffy, but does not fall out before picking, giving it good storm proofness. Its lint percent ranges from 37 to 40—a good gin turnout. In boll size it runs 75 to 90 per pound.

The plants are vigorous and spreading, of medium height and have medium to light foliage which reduces its susceptibility to boll rot.

Stardel, the last three years, averaged 880 pounds of lint per acre as compared with 821 pounds for Delta-pine 15 and 781 for Fox.

Bred by Fred W. Self, Associate Agronomist of the Louisiana State University, Agricultural Experiment Station.

Louisiana State Registered Stardel Cotton Seed. Not prepaid: 100 lbs. \$15.25; 300 lbs. \$45.25; 2,000 lbs. (ton) \$295.00.

Deltapine 15

919 DELTAPINE 15

Reuter is offering this wonderful strain of Deltapine Cotton. Deltapine 15 is very productive and has a high lint percentage, or gin turnout, which has always distinguished the Deltapine variety. It has stronger fiber; these two qualities account for the fact that 15 has definitely better spinning quality than any of the previous Deltapines.

The cotton industry has now reached the stage in which manufacturers are informing themselves on the adaptability of different cottons for their particular purposes. Not only must a cotton yield well, but it must consistently pick out in relatively good grades and, when spun into yarn must have good strength and good appearance.

State Certified Blue-Tag Cotton Seed. Not prepaid: 100 lbs. \$11.00; 300 lbs. \$32.55; 2000 lbs. (ton) \$195.00.

Crotalaria

OUR CROTALARIA SEED IS SCARIFIED

Reuter's Crotalaria seed is hand-picked, machine cleaned and cured in the most approved manner. Our reputation stands back of every bag we sell and the seed will represent the very best this season has produced.

885-A Spectabilis, Early Strain. An early strain in every way equal to the common variety, but matures three weeks earlier and more dwarf in growth. Makes nearly as heavy a tonnage. Can be sown from March until July. More desirable for planting in fruit and pecan orchards and will mature seed and can be plowed under before the nuts fall. Customers in upper South should plant this type. Lb. 70c; 5 lbs. \$2.75. For larger quantities, see price-list on page 60.

885 Spectabilis, Late. A remarkable summer cover crop and soil builder yielding 40,000 pounds of green weight per acre. When turned under is the equivalent of 800 pounds of Nitrate of Soda. It is not recommended for hay. Requires no fertilization, no liming, no inoculations. Reseeds itself under favorable conditions. Broadcast just before the last cultivation of cotton or corn. It will just about double the crop yields following it. Thrives on any soil. Broadcast 10 to 15 pounds on well-prepared land from March through June, harrowing in not over 2 inches, while the soil is moist. Lb. 70c; 5 lbs. \$2.75. For larger quantities, see price-list on page 60.

886 Giant Striata. This variety is outstanding for its rapid and mammoth growth which makes it possible to resist weeds and grasses. It furnishes an unusual amount of green manure and nitrogen to the soil which will be of immense benefit to all subsequent crops. Sow from March to July on well prepared land at the rate of 10 to 15 lbs. per acre. Lb. 70c; 5 lbs. \$2.75. For larger quantities see price-list on page 60.

Sesbania

884 Macrocarpa.

A great summer growing fertilizer crop. Citrus growers find it makes more tonnage quicker and affords shade for the young trees during hot weather. In 8 to 10 weeks, from germination, it is time to plow under when the seed is in the dough. Plants attain a height of 8 to 10 feet and a limb spread of 4 to 6 feet. The leaves are finely cut and decay rapidly. The roots grow quickly and are entirely covered with nodules. Also valuable for game preserves. Quail are very fond of the seed which lie on the ground a long while in good condition. Citrus growers should drill 30 lbs. per acre between trees. Truckers should sow 40 lbs. per acre and cover lightly. Cotton and corn farmers sow at the rate of 12 to 20 lbs. per acre. Cultivation readily kills Sesbania. Lb. 65c; 5 lbs. \$1.95. Not prepaid: 10 lbs. \$2.30; 100 lbs. \$20.00.

MUNG BEANS

710 Jumbo. The roots are crowded with nitrogen gathering nodules and it is truly a great crop to turn under for building up your soil. For hay, plants grow erect and bushy not lodging except on rich bottom land. Grows 3 to 5 feet high, easily cut and cured—stock eat it clean with less waste than peavine hay. Yields run from 500 to 1,000 pounds per acre. Mung Beans do well on sandy to heavy clay soil that will grow any kind of grain crop. Plant 3 to 5 pounds per acre in 3½-foot rows. Broadcast 10 to 15 pounds per acre. Matures in 90 to 120 days. ½ lb. 30c; 1 lb. 65c; 2 lbs. \$1.20; 5 lbs. \$2.20. Not prepaid: 10 lbs. \$2.50; 100 lbs. \$22.00.

BROOM CORN

723A Standard Evergreen. Grows 7 to 12 feet tall, and the brushes are usually from 12 to 24 inches long. The brush should be harvested when the natural green color extends from the top of the fiber to the base of the head. ½ lb. 25c; 1 lb. 65c; 5 lbs. \$2.50. Not prepaid: 10 lbs. \$2.90; 100 lbs. \$26.00.

Pasture Showing Good Management
We Accept U. S. Government Purchase Orders.

Medium RED CLOVER

737 Recommended as pasture Clover and soil improver on meadows. Some use it for hay, and yields 1 to 2 cuttings. In the states North of the Cotton Belt, Red Clover is sometimes a perennial, but as a rule it does not survive Southern summers. Most soils suit this great soil-improving clover. Commence sowing during the early spring at the rate of 12 to 15 lbs. per acre or in pasture mixtures with other crops, 5 lbs. per acre. Inoculate seed with NITRAGIN B. Lb. \$1.10; 5 lbs. \$4.15. Not prepaid: 10 lbs. \$5.80; 100 lbs. \$53.00.

KENLAND RED CLOVER

699-A Certified. Kenland Red Clover was bred particularly for its disease-resistance. Highly tolerant to cold winters and summer droughts, it is a variety well worth sowing. Kenland produces more root and nodule growth than the regular Red Clover and as a result adds that much additional nitrogen to the acre. Sow at the rate of 10 to 15 lbs. to the acre in the early fall and spring or 7 to 10 lbs. in mixtures. Inoculate seed with Nitragin "B" for best results. Lb. \$1.15; 5 lbs. \$4.35. Not prepaid: 10 lbs. \$6.50; 100 lbs. \$60.00.

Port Gibson Strain Red Clover

746 An excellent and popular strain of red clover produced in Mississippi and therefore well acclimated to the South. Sow at the rate of 12 to 15 lbs. per acre if planted alone, 8 to 10 lbs. if planted in mixtures. Inoculate seed with Nitragin B for best results. Lb. \$1.10; 5 lbs. \$4.10. Not prepaid: 10 lbs. \$6.00; 100 lbs. \$56.00.

Reseeding Crimson Clover

Plant seeds on well prepared soil in drills at the rate of 10 to 15 lbs. per acre or 15 to 20 lbs. per acre broadcast, covering seeds lightly about $\frac{1}{4}$ to $\frac{1}{2}$ inch by use of cultiotacker or drag. For best results inoculate seed with Nitragin "B." Lb. 85c; 5 lbs. \$3.15. Not prepaid: 10 lbs. \$3.80; 100 lbs. \$35.00.

Camellia Oats GOOD SPRING GRAZING

778 (Certified) Developed by the Louisiana Agricultural Experiment Station and released in 1942. This strain of Oats is the result of years of selection and testing. It has shown almost complete resistance to leaf rust—a particularly important factor in South Louisiana where leaf rust epidemics in many parishes have made oats a hazardous crop. It is not resistant to stem rust but this disease is less prevailing and also less serious since it does not become severe until the plants are practically mature. The Camellia Oat produces strong, vigorous plants reaching up to 4 feet in height, and have large plump kernels with an insignificant awn. The large dark green leaves furnish a dependable winter grazing crop. It is a heavy yielder and returns of 65 bushels per acre are reported from South Louisiana. Not prepaid: Bus. (32 lbs.) \$2.75; 4 bus. or over \$2.40 per bus.; 48 bus. or over \$2.35 per bus. Write for quantity prices when ready to buy.

HAIRY PERUVIAN ALFALFA

702 Superior to all types for production where the temperature does not fall below 10 degrees Fahrenheit. Highly recommended for the entire lower South. Yields 10 to 20 per cent more growth during the Winter and can be cut through the entire year for hay. It is a tall, vigorous grower, and will live as long as any type where the Winters are not too cold and where there is Summer moisture. Yields one more cutting and from one to three tons more hay in a season than other Alfalfa. On poor or sandy land, Hairy Peruvian will give you cuttings of hay where other kinds will not. Sow during early Fall and Spring in thoroughly prepared, well-drained soil, broadcast or in drills, at the rate of 15 to 20 pounds per acre. Alfalfa will produce more good feed per acre, add more vegetable matter and nitrogen to the soil than any other crop. Seed should be inoculated. Lb. 85c; 5 lbs. \$2.95. Not prepaid: 10 lbs. \$3.65; 100 lbs. \$33.50. Write for quantity prices when ready to buy.

PEERLESS BRAND ALFALFA

701 Arizona-grown. Perfectly adapted to almost the entire upper South. Customers tell us that it will yield more than Utah and Kansas seed. Peerless Brand has the hardiness and yielding quality you demand in Alfalfa. Where it is planted on good, well-drained soil, with some lime, it will last almost indefinitely and cold does not kill it after it becomes well established. Lb. 85c; 5 lbs. \$2.95. Not prepaid: 10 lbs. \$3.65; 100 lbs. \$33.50.

Medium Red Clover

Melilotus Alba

735 (Melilotus alba). A biennial Sweet Clover. Grows two years from one seeding. Makes a large growth the first year, but a much heavier growth the second due to its extensive root system. It's a great soil builder. Relished by all kinds of livestock. No other pasture crop measures up to the summer and fall grazing furnished by this plant. Should be in all pasture mixtures. Here in the South two cuttings of hay are had the first year, and one cutting and a seed crop the second or grazing entirely, if preferable. Plant during spring and early fall at the rate of 15 to 20 pounds per acre, if sown alone. Seed should be inoculated for best results with NITRAGIN. Lb. 60c; 5 lbs. \$2.35. Not prepaid: 10 lbs. \$2.75; 100 lbs. \$24.50.

Certified LADINO CLOVER

720 Certified. Similar in appearance and habit of growth to the common White Dutch Clover, but a much stronger and taller grower. It is excellent for hay, very rich in protein and is relished by all kinds of livestock. Also fine for pastures and if not grazed too closely will remain green until Fall. Sow 2 to 3 lbs. to the acre if planted with grasses, 5 to 6 lbs. if sown alone. Lb. \$1.40; 5 lbs. \$5.85. Not prepaid: 10 lbs. \$8.70; 100 lbs. \$82.00.

HUBAM CLOVER

721 An annual White Blossom Sweet Clover resembling the biennial white (Melilotus Alba) in appearance. From a slow start it will reach a growth of 7 to 8 feet in a few months. Alyce Clover { THE GREATEST SUMMER CLOVER FOR THE SOUTH! }

A Field of Alyce Clover

IMPROVED Louisiana WHITE CLOVER

722 This improved strain of Louisiana-grown White Clover grows much more vigorous and will last longer than the regular White during our hot Summer months. It starts out very early in the Fall and when properly cured makes an excellent winter pasture. Two cuttings of hay may often be obtained. This clover came originally from New Zealand where it is also known as Mother Clover. Sow during the Fall at the rate of 10 lbs. per acre when sown alone, or 4 to 6 lbs. on established pastures. For maximum results inoculate seeds with Nitragin "B." $\frac{1}{4}$ lb. 65c; lb. \$1.70; 5 lbs. \$7.25. Not prepaid: 10 lbs. \$12.50; 100 lbs. \$115.00.

LESPEDEZA

The Wonder Crop

Unequalled for hay, pasture and soil-building. Adapted to a wider area than any other known legume. Withstands droughts that would kill other crops. Increases the grazing capacity of pastures from twenty-five to fifty percent. Grows anywhere—on acid soils, waste lands, worn-out gravelly soils and galled hillsides where nothing else of value will grow. Reseeds itself every year, even when severely grazed, but is easily killed out by a cultivated crop. Does well in mixtures in all Southern pasture grasses.

Inoculate All Lespedeza with Nitragin "L"

For a better stand and maximum yield, inoculate your seeds with Nitragin before planting. The procedure is simple and inexpensive. Full directions on each can. 100 lb. size can 60c postpaid.

KOBE

730 Makes the greatest growth and thrives over the entire South. It is of spreading growth, but stands up well when the stand is thick. It produces an abundance of seed which are larger than the Common. It is more drought-resistant than the Common, being deeper rooted and starts growth earlier. Recommended for the main cotton belt, or from southern Arkansas, Tennessee and coastal North Carolina south. It greatly outyields the Common for hay and pasture in this territory with the same range of distribution. If it is to be used for hay and sown alone, sow 30 to 35 pounds of seed. On permanent pasture lands where Kobe Lespedeza is to be one of the legumes in the planting mixture, sow 10 to 12 pounds to the acre. It should be planted in early spring for best results. Kobe makes an abundant all-summer and fall pasture. For soil improvement Kobe should be better appreciated. Its large root system, heavy foliage growth and adaptation to poor, alkaline soils, makes it very desirable as a soil-builder. Lb. 60c; 5 lbs. \$2.15. For larger quantities, see price-list on page 60.

ALYCE CLOVER

727 Like Lespedeza it is a summer annual reseeding each fall and volunteering the next summer, but grows twice as tall and furnishes much more hay or pasture of finer quality feeding value and palatability. When cut early for hay a second growth will produce a seed crop, 350 to 600 pounds per acre. Cut hay in early bloom and rake as soon as drying permits. It dries readily and can be baled the day following harvesting. Grows well in shade of wooded pastures or orchards. Has more root nodules than Crotalaria and is 50% better for soil improvement. Does well in acid soil if not too wet. Resistant to insects, diseases, heat and drought. Makes 2-4 tons hay per acre. Seeded on Bermuda, Dallis, Carpet or other grass sods it furnishes nitrogen that is lacking in Southern soils, and doubles the growth of grass. It has 4 times more calcium, twice as much phosphorus and 2½ times as much protein as Carpet Grass. When cows graze on it their milk flow increases. Plant during spring and early summer at the rate of 10-12 lbs. per acre broadcast. Inoculate seed with Nitragin E. Write for free cultural leaflet. Lb. 60c; 5 lbs. \$1.75. Not prepaid: 10 lbs. \$2.10; 100 lbs. \$17.50. Write for current quantity prices when ready to buy.

WHITE CLOVER LA. GROWN

734 White Dutch Clover is the only plant that furnishes abundant grazing throughout the year under severe Southern conditions. It is not easy to tramp out, and restricts soil-washing and adds fertility. It is relished by all livestock.

Sow during the fall and early spring at the rate of 10 lbs. per acre when planted alone. On established pastures, from 4 to 6 lbs. of seed per acre will give a good stand. Seed should be inoculated with NITRAGIN B. Lb. \$1.60; 5 lbs. \$6.75. Not prepaid: 10 lbs. \$11.00; 100 lbs. \$100.00.

BLACK MEDIC CLOVER

742 Thrives on all soils except loose sands and water-logged types. It spreads faster than any other Clover. Reseeds itself with the closest possible grazing. Yields a very nutritious pasture. Sow until March. Also used to excellent advantage as cover crop. Sow 10-15 pounds an acre. Inoculate seed. Lb. 65c; 5 lbs. \$2.70. Not prepaid: 10 lbs. \$3.40; 100 lbs. \$31.00.

SERICEA

731 (Perennial). A wonderful, drought-resistant, permanent legume. Thrives on poor land and acid or sour land, as well as rich soil. Its root system reaches 1 to 3 feet in the soil for nourishment. Makes slow growth on poor soil for the first year, but when once established, it produces an abundance of nutritious forage that is relished by all livestock. The second-year growth each plant puts out 20 to 30 stalks from 5 to 6 feet tall, producing a better quality hay in succeeding years and gives three cuttings per season. Produces as high as 3 to 4 tons of dry hay equal to alfalfa in feeding value. The roots survive the coldest winters. May be closely grazed. A heavy yielder of seed. Reuter offers you only recleaned, hulled and scarified seed. If a seed crop is wanted, sow 4 to 5 pounds per acre in 3-ft. rows on well-prepared seed bed from February until July, the earlier the better. For hay broadcast 15 to 20 pounds per acre. Cover seed very lightly. Cultural leaflet free. Seed should be inoculated. Lb. 75c; 5 lbs. \$3.25. For larger quantities, see price-list on page 60.

COMMON

733 The most widely-grown variety. Does well over a wider territory than other varieties. The most important pasture legume in the South. Increases carrying capacity of pasture lands from 25 to 50%. Grows on poor soils, including acid types, and supplies grazing during the summer and fall months when most pasture plants are suffering from hot sun. On good soil will produce an excellent growth, and reaches a height of from 18 to 30 inches. The small stems of the plant make it an easily cured hay crop. Seed should be planted on a well-prepared but firm seed bed in February or March. On grazing crops sow 10 to 15 pounds per acre. When planted alone for hay crop sow 25 lbs. Lb. \$1.00; 5 lbs. \$4.50. For larger quantities, see price-list on page 60.

NOTICE

Reuter accepts government purchase orders. Mail them in to us and your order will be given prompt and careful attention.

It is an annual, reseeds indefinitely although closely grazed. It is highly recommended for the upper South where the seasons are shorter and may be planted with other grasses and clovers in the spring, using from 5 to 10 pounds of seed per acre. When sown alone broadcast 25 lbs. to the acre. February and March are the best months to plant. Lb. 50c; 5 lbs. \$1.75. For larger quantities, see price-list on page 60.

Recleaned COWPEAS

Cowpeas are the South's greatest soil-improving and hay-crop. Pound for pound, Cowpea hay is as valuable as clover hay. Nearly equals in value alfalfa and wheat-bran. Contains four times as much digestible protein as timothy hay. Makes a fine feed for work- and beef-stock and dairy cattle. Adds nitrogen to the soil and improves its mechanical condition. There is no cheaper way to improve land than by growing Cowpeas.

Cowpeas can be planted any time from April until August broadcast or in drills 3 to 4 feet apart. Cultivate two or three times. Broadcast, 1 to 2 bushels are required per acre, and 2 to 3 pecks for seeding in drills. Inoculate your seed for best results.

IRON

806 A vigorous and running type. Vines are 4 to 5 feet long, with large, dark green leaves. Makes especially fine hay. Not affected by rust. Immune from wilt and root-knot. One of the most popular varieties. Lb. 60c; 2 lbs. \$1.00; 5 lbs. \$2.25. For larger quantities see price-list on page 60.

CLAY

796 Medium large, of running habit; fine for soil-improvement. The pods ripen very uniformly. Very popular as a dry pea for table use. Lb. 65c; 2 lbs. \$1.10; 5 lbs. \$2.35. For larger quantities, see price-list on page 60.

BRABHAM

807 A highly disease-resistant, early variety that grows upright and retains foliage exceptionally well. It is wilt-proof. Grows well on all soils. When planted early, two cuttings of nutritious hay can be made. Practically free from nematodes. Lb. 65c; 2 lbs. \$1.10; 5 lbs. \$2.35. For larger quantities, see price-list on page 60.

Great HOG CROPS

CHUFAS

815 The Chufa is a species of ground-nut, most easily grown. Any land suitable for corn, cotton, or peanuts will make a bumper crop of Chufas. Plant from April until the end of June, in 2½- to 3-foot rows, dropping 3 to 5 Chufas together, 16 to 18 inches apart in the row, and cover 2 inches deep. In the fall pull up a few plants for your stock to taste, and they will then go over the entire field and will attend to the harvesting. Requires 1 to 1½ pecks to plant an acre. The crop is usually matured about September 15, and can be left in the ground until time to turn the hogs in. Lb. 70c; 2 lbs. \$1.20; 5 lbs. \$2.25. Not prepaid: 10 lbs. \$2.50; 100 lbs. \$22.00.

ARTICHOKE

816 Jerusalem or Ground. Every hog-raiser should grow Artichokes, for they come year after year, and keep the hogs in fine condition. You grow them just as you would potatoes: Cut them two eyes to the piece and plant 2 inches deep, 15 to 18 inches apart in 3- to 3½-foot rows. In the fall when they have matured, turn the hogs into the field, and they will feed on them all winter except when the ground is wet or frozen. They are more productive than potatoes. Yields of 700 bushels have been grown on an acre of good land, but 300 to 400 bushels is nearer the average crop. Although grown principally for hogs, they are fine food for cattle, sheep and horses. Also make an excellent table dish when served hot or chilled. Requires about 250 pounds to plant an acre. Plant during March or April, the earlier the better; they stand considerable drought and extreme cold weather. Lb. 60c; 2 lbs. \$1.10; 5 lbs. \$2.35. Not prepaid: 10 lbs. \$2.85; bus. (50 lbs.) \$12.50.

Soil Building

LEE (Non-Shattering)

712 This is a new superior, non-shattering, disease-resistant soy bean for the Delta. Lee has shown very little shattering even eight to ten weeks after maturing. The plant is 30 to 36 inches tall with moderate size stems, heavy foliage, and purple flowers. Seed is glossy yellow with black hilum. A high quality variety giving outstanding performance. Lb. 50c; 2 lbs. 90c; 5 lbs. \$1.75. For larger quantities see price list on page 60.

MAMLOXI

704 (Matures in 130 days.) A Mammoth Yellow and Biloxi, developed by the Delta Experiment Station. It's the highest producing of all strains tested at the station, having produced above 50 bushels per acre. It is much better than Biloxi for hay, grazing, planting in corn and soil building. Shatters less than any other variety. Mamloxi is the best edible Soy Bean yet developed, and should be considered in our food production program. Sow 2 bushels per acre broadcast to produce more hay and better quality than any other upright bean. Lb. 45c; 2 lbs. 75c; 5 lbs. \$1.50. For larger quantities see price list on page 60.

C N S (24)

Clemson Tall Growing Shatterproof

716 (Matures in 165 days.) This variety produces an excellent quality of hay. The plants grow erect on less fertile soil, while the branches have twining terminals. Stems and leaves are of medium size. The plant or length of vine grows to a height of approximately 6 feet. The seed is of medium size with black hilum, and of a straw-yellow color. One bushel will plant 2 to 3 acres if sown in rows 2½ to 3 feet apart. Lb. 45c; 2 lbs. 75c; 5 lbs. \$1.50. For larger quantities see price list on page 60.

AVOYELLES

706 (Matures in 170 days.) This type is widely and successfully grown in Louisiana. The leaves and stems are large and coarse and the plant is a semi-viny, bushy type. The seeds are dull black and slightly larger than the O-too-tans. It produces 25 to 30 bushels of seed per acre. Yields over 3 tons of cured hay per acre. Louisiana planters prefer it to the O-too-tans because the Soy Bean caterpillars show a preference for O-too-tans when both are grown in the same field. One bushel plants 2½ to 3 acres in rows 2½ to 3 feet apart, 4 to 8 inches apart in drill. Lb. 50c; 2 lbs. 90c; 5 lbs. \$1.75. For larger quantities see price list on page 60.

SOY BEANS

-PELICAN-

705 (Matures in 145 days.) An excellent early maturing, new, yellow Soy Bean, developed by Louisiana State Department of Agriculture. It is a very strong grower with a heavy crop of foliage, making it particularly valuable as a cover crop. It is a free seeder and produces from 20 to 30 bushels of seed per acre. The seed does not scatter as readily as other varieties of Soy Beans. Pelican is the first yellow seeded Soy Bean that compares favorably with the popular Avoyelles and will, no doubt, replace same in many sections when it becomes better known. One bushel will plant 3 to 3½ acres if sown in rows 3 feet apart. Lb. 45c; 2 lbs. 75c; 5 lbs. \$1.50. For larger quantities see price list on page 60.

MAMMOTH YELLOW

707 (Matures in 145 days.) Grows more than 3 feet high and can be cut with a mower. A good hay bean used by many farmers for an early hog and cattle crop. Drill in rows 3 feet wide, using ½ bushel of seed per acre, or broadcast a bushel to the acre. Lb. 50c; 2 lbs. 90c; 5 lbs. \$1.75. Quantity prices on page 60.

BILOXI

708 (Matures in 165 days.) For grazing, for hogging down with corn, and for soiling it is unexcelled. Best results when planted in rows 3 to 5 feet wide. Yields 10 to 15 tons of green forage per acre. Will stand wet, drought. One bushel plants 1½ to 2 acres. Lb. 45c; 2 lbs. 75c; 5 lbs. \$1.50. For larger quantities see price list on page 60.

O-TOO-TANS

709 (Matures in 170 days.) The most popular main-crop hay and soil-improving Soy Bean. Compared with cowpeas, one-fourth the amount of seed will produce double the amount of hay. Compared to velvet beans, it makes a better cover-crop, does not overrun trees or fences, and can be cut for hay if wanted. There is no legume that will put as much humus and nitrogen combined into the soil. Produces 4 to 6 tons of dry hay, or 10 to 15 tons of green forage per acre, and surpasses alfalfa in feed-value. When grown for seed, you can expect 15 to 20 bushels per acre. It is seldom affected by wet or dry weather. Less liable to shatter than other sorts. Plant in rows 2½ to 3 feet apart, 4 to 8 inches apart in drill. A bushel will plant 3 to 4 acres solid, or from 6 to 8 acres in corn middles. Lb. 50c; 2 lbs. 90c; 5 lbs. \$1.75. For larger quantities see price list on page 60.

OGDEN

711 This is a heavy yielding and non-shattering variety with heavy oil content. Yields in past seasons have been reported as high as 30 to 50 bushels per acre. Our opinion is that every Soy Bean conscious farmer should at least try this outstanding variety. Lb. 45c; 2 lbs. 75c; 5 lbs. \$1.50. Quantity prices on page 60.

-VELVET BEANS-

Make an enormous growth and as a soil-improver they are considered superior to cowpeas. The seed should not be planted until the ground has become warm. Plant a peck to a half bushel per acre, in rows 5 feet apart and 2½ to 3 feet apart in the row. Also grown with corn. Plant the corn in 5-foot rows and 3 feet apart in the row. The Beans are planted between the hills, and at the last working they are planted between the rows. Frequently stock is turned into the field and no attempt made to harvest the corn, or sometimes the ears are pulled from the stalks before the animals are turned in to graze. Inoculate your seed for best results.

90 DAYS EARLY SPECKLE

713 This is the most valuable and popular variety. It is very prolific and can be planted later than other sorts on account of its early maturity. Makes a wonderful growth of vines for pasturing, and is a fine soil-improver. For the good of the land, grow Velvet Beans, and for the good of the cow, grow Velvet Beans. Two pounds of Velvet Beans in the pod will be found equal for milk production to one pound of cotton-seed meal. Lb. 60c; 2 lbs. \$1.00; 5 lbs. \$2.35. For larger quantities see price list on page 60.

BUSH OR BUNCH

714 Grows 3 feet high. Matures in 120 days. Very popular as a green-manure crop in orchards. Best for growing in corn as the plants do not vine and weigh down the stalks. May also be grown with other crops. Easily harvested. Lb. 75c; 2 lbs. \$1.25; 5 lbs. \$2.80. For larger quantities, see price list on page 60.
